12 Volt Case Fan, Part # A216-1016

Cut round hole large enough for circular area of fan, but small enough so fan can screw into wood. All electrical connections are soldered and then shrink tubed. Use two conductor marine wire long enough to reach your electrical source. Caulk around edge of fan on inside and put bead of caulk around inside edge of louver to prevent leakage. Some will squeeze out and be sure to wipe off excess. Fan draws .15 amps so use a small fuse in holder. Use Stainless screw to fasten louver and fan to door.

Total Cost Including Wire Should Be Under \$30.00
